# Education & Youth

In January 2012, the State of Maryland was ranked #1 in the nation for education for the 4<sup>th</sup> year in a row.<sup>1</sup> Over the past several years, Baltimore City has experienced improvements in both school and student performance. Since 2005, fewer students withdrew from school, fewer students were chronically absent, more 12th grade students completed high school, and student testing performance has increased. An important indicator tracked by BNIA-JFI, chronic absence, while having decreased over the past few years, increased slightly from 2009 to 2010. Students that are chronically absent have lower graduation rates and are more likely to perform poorly in school. Reductions in chronic absenteeism has been linked to long-term benefits such as greater earning potential for students earning at least a high school diploma and decreases in Baltimore City's juvenile crime rate.<sup>2</sup> Overall, analysis of Baltimore City Public Schools data found that:

- The percentage of students who withdrew before completion of high school declined by more than half from 2005 to 2010;
- The percentage of students who completed high school increased by nearly 5 percentage points from 2005 to 2010; and
- From 2005 to 2010, while the chronic absenteeism rate for elementary and high school students remained steady, the rate for middle school students decreased significantly by more than 13 percentage points.

These are all important indicators pointing to improving conditions and student performance resulting from the policies and efforts of Baltimore City Schools and its many partners. The education and youth indicators tracked by BNIA-JFI are described in greater detail below.

BNIA-JFI tracks twenty seven indicators for elementary, middle, and high school students in an effort to measure the educational performance and youth engagement in Baltimore City. These indicators are grouped into the following seven categories: student enrollment and demographics; dropout rate and high school completion; student attendance, suspensions and expulsions; elementary and middle school student achievement; high school performance; youth labor force participation; and youth civic engagement. The source of data for the Education and Youth section is provided by the Baltimore City Public School System, the American Community Survey and the Baltimore City Board of Elections. The data provided by the Baltimore City Public Schools includes student address, which allows BNIA-JFI to present data on educational performance by the neighborhood in which the student lives, not by the school attended. <sup>3</sup> This allows BNIA-JFI to examine the relationship between community conditions and educational performance.

<sup>1</sup>Education Week, Interactive State Report Cards, http://www.edweek.org/ew/qc/2012/16src.h31.html?intc=EW-QC12-LFTNAV

Vital Signs 10 Education and Youth

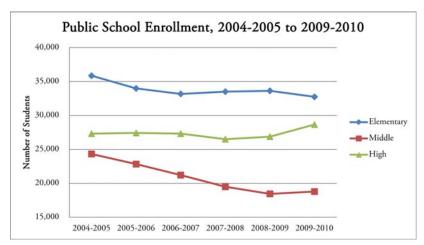

<sup>&</sup>lt;sup>2</sup> Green, Erica. The Baltimore Sun. *In Baltimore, more time in school means less juvenile crime.* November 13, 2010.

<sup>&</sup>lt;sup>3</sup> Per an established Memorandum of Understanding with the Baltimore City Public Schools, BNIA-JFI aggregates student-level data to a larger geographic level to ensure student confidentiality.

Education and Youth indicators may not be directly comparable to data provided by either the Baltimore City Public School System or the Maryland Department of Education due to several reasons including differences in methodology used to create indicators, excluding students who cannot be matched between data files provided by BCPSS, and excluding students whose home address cannot be geocoded. In the 2009-2010 school year, 3.4% of the student addresses could not be matched or geocoded. This means that these students were not included in our analysis and not included in calculations for the City as a whole and therefore direct comparisons to data and results available through the Baltimore City Public Schools and the Maryland Report Card cannot be made.<sup>4</sup>

#### Student Enrollment and Demographics

The roughly 190 public schools in Baltimore City serve approximately 80,000 students annually. The Baltimore City School system consists of traditional elementary, middle, and high schools, as well as a variety of other school types, which include charter, innovation, transformation, and selective admission middle and high

schools. BNIA-JFI tracks eight indicators of student enrollment and demographics which provide a base of understanding as to the students attending Baltimore City Public Schools. These data are also used as the denominator in the various comparisons made in the Vital Signs report. It is important to note that BNIA-JFI reports enrollment using the number of students enrolled *at any point* in the school year. This figure differs from enrollment figures reported as of September 30<sup>th</sup> each school year by BCPSS and the Maryland State Department of Education.

- Total enrollment for elementary and middle school students has decreased from 2005 to 2010 whereas high school enrollment has increased over this same time period.<sup>5</sup>
- The majority of students that attend Baltimore City Schools are African American (87.3%). While both the percentage of African American and white students has declined from 2005, the percentage of Hispanic students has increased from 1.8% in 2005 to 2.9% in 2010.
- The percentage of students receiving free/reduced meals increased from 71.4% in 2005 to 83.2% in 2010. This increase can be attributed to the City School's campaign to increase participation in this program among all households.

Vital Signs 10 Education and Youth

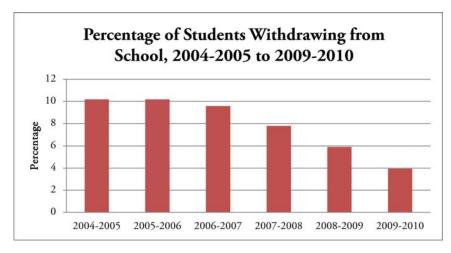

<sup>&</sup>lt;sup>4</sup> For City level educational data and indicators of student demographics, assessments, and graduation, please go to: <a href="http://www.mdreportcard.org/">http://www.mdreportcard.org/</a>.

<sup>&</sup>lt;sup>5</sup> The increase in the high school enrollment may be in part be due to the creation and implementation of the Great Kids Come Back program, an effort launched by the school system in 2008 to encourage the return of students who had previously dropped out back to school.

• The percentage of students who are enrolled in Special Education programs increased after remaining steady, averaging 16.2% from 2005 to 2009, increased to 17.3% in 2010.

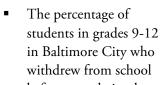

#### Dropout Rate and High School Completion

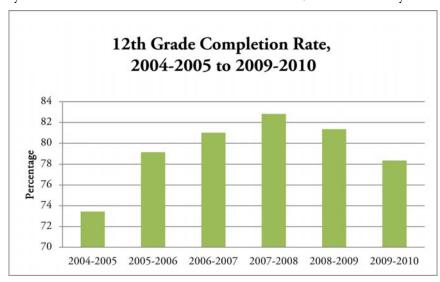

The City Schools and numerous other partners, including the City government, foundations, and non-profits continue to focus their efforts on reducing the number of school dropouts and increasing high school completion. For instance, the Baltimore City Schools created the Great Kids Come Back program and the

Family League has dropout prevention as part of its Youth Development Strategy. Reports, studies, and news articles have linked a lower dropout rate and increasing graduation rate to higher wages and economic security, better health outcomes, and reduced criminal activity. A study by the Baltimore City Department of Health found that nearly all of the youths involved in violent crime from 2002 to 2007 were chronically

absent and that well over half had been either suspended or expelled<sup>6</sup>. BNIA-JFI tracks both the dropout rate of students (9<sup>th</sup> through 12<sup>th</sup> grade) and the high school completion rate (12<sup>th</sup> grade only)<sup>7</sup> of Baltimore City Public School Students.

before completion has declined by over four percentage points from 10.2% in 2005 to 3.9% in 2010.

• In 2010, 3.9% of high school students withdrew before completion. This is a decrease of 2 percentage points from 2009.

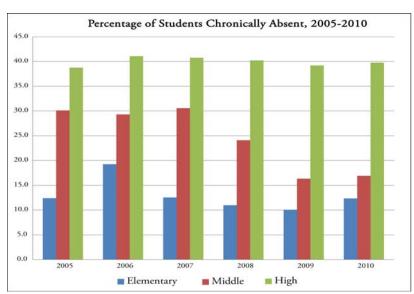

<sup>&</sup>lt;sup>6</sup> http://www.baltimorehealth.org/info/2009\_08\_31\_YouthViolenceReport.pdf

<sup>&</sup>lt;sup>7</sup> The completion rate used by BNIA-JFI is the percentage of 12<sup>th</sup> graders that complete High School out of all 12<sup>th</sup> graders enrolled at any time during that school year. BNIA-JFI's methodology differs from Maryland State Department of Education and Baltimore City Public Schools calculations for completion rate of high school students. For more information go to: <a href="http://www.mdreportcard.org/">http://www.mdreportcard.org/</a>.

- Since 2005, the percentage of students that withdraw before completion declined in 51 CSAs. The decline in the percentage of students that withdraw was greatest in Poppleton/The Terraces/Hollins Market (-14.8%), Southwest Baltimore (-14.2%), and Washington Village (-13.5%).
- The percentage of students in 12<sup>th</sup> grade that received a Maryland high school diploma or equivalent (i.e. certificate/GED) at the end of the year continued to decline from a peak of 82.8% in 2008 to 78.4% in 2010.
- Despite declining completion rates in recent years, the high school completion rate for Baltimore City has increased by nearly five percentage points from 73.4% in 2005 to 78.4% in 2010.

#### Student Attendance, Suspensions and Expulsions

The City Schools and its numerous partners continue to make increasing student attendance a priority. As an example, Baltimore City Schools in partnership with the Open Society Institute, the Baltimore Education Research Consortium (BERC), and BNIA-JFI, participated in a workgroup focused on identifying the number of chronically absent students, the schools where they are registered to attend, and the neighborhoods

impacted by high rates and numbers of chronically absent students. Students that miss significant amounts of school have been shown to have lower student performance, are more likely to drop out, lower graduation rates, and increased behavior problems. A study by the National Center for Children in Poverty found that students who missed at least 10% of days in kindergarten scored lower in reading, math, and general knowledge tests when compared to students who missed fewer days of school. Keeping students in school is essential to increasing graduation rates. This is especially true for keeping elementary school students engaged and attending school. Students who are chronically absent in the early grades are more likely to continue to be chronically absent in later grades and not complete their education. Research by BERC has found that chronically absent 9th graders had already established poor attendance patterns in earlier school years. BNIA-JFI tracks the chronic absenteeism rate (the percent of students who miss 20 or more school days per year) for elementary school students, middle school students, and high school students. In addition, BNIA-JFI also tracks the percentage of students who were suspended or expelled during the school year.

• In 2010, over 4,000 elementary school students were chronically absent. The percentage of elementary school students that were chronically absent increased from 10.1% in 2009 to 12.3% in 2010. The CSAs with the greatest percentage of chronically absent elementary students were

<sup>8</sup> http://www.nccp.org/publications/pub 837.html

<sup>9</sup> http://baltimore-berc.org/pdfs/3A%20Final%20report\_06-15-10.pdf

- Brooklyn/Curtis Bay/Hawkins Point (19.6%), Morrell Park/Violetville (17.0%), and Edmonson Village (16.7%).
- In 2010, nearly 3,200 middle school students were chronically absent. The percentage of middle school students that were chronically absent increased slightly from 16.3% in 2009 to 16.9% in 2010. There were 18 CSAs in 2010 where more than one out of every five middle school students were chronically absent with the greatest percentage of chronically absent middle school students residing in Edmonson Village (38.2%).
- In 2010, nearly 11,400 high school students were chronically absent. The percentage of high school students that were chronically absent increased slightly from 39.2% in 2009 to 39.7% in 2010. In 2010, there were 28 CSAs where at least 40% of the high school students missed at least 20 school days and there were three CSAs where at least one out of every two high school students missed 20 or more school days.
- The percentage of all students who were suspended or expelled during the school year increased from 8.1% in 2009 to 8.7% in 2010.

#### Elementary and Middle School Student Achievement

One way to measure educational progress and readiness of students is to examine standardized test scores. Students across the State are required to take the Maryland School Assessment (MSA) test. The MSA is a test of a student's math, reading, and science proficiency. BNIA-JFI tracks the percentage of 3<sup>rd</sup>, 5<sup>th</sup>, and 8<sup>th</sup> graders who score at an advanced or proficient level in reading and math MSA tests. These indicators are normalized by the total student enrollment for each of those grades. Overall, City School students have made significant improvements in their MSA scores with both reading and math scores for 3<sup>rd</sup>, 5<sup>th</sup>, and 8<sup>th</sup> graders increasing. Due to the inability to match or geocode 3.4% of the total student addresses, a small number of students were not included in the student achievement analysis. The following numbers do not include all Baltimore Public School students and differ slightly from BCPSS reported figures (please see footnote number 4).

- In 2010, for 3<sup>rd</sup> graders
  - o 77.5% scored Advanced/Proficient in their Maryland School Assessment math exam. This was an increase of almost 21 percentage points from 2005.
  - o 72.5% scored Advanced/Proficient in their reading exam. This is an increase of nearly 12 percentage points from 2005.
- In 2010, for 5<sup>th</sup> graders
  - o 70.9% scored Advanced/Proficient in their math MSA exam. This is an increase of over 22 percentage points from 2005.
  - 80.4 scored Advanced/Proficient in their reading exam in 2010. This is an increase of nearly 25 percentage points from 2005.
- In 2010, for 8<sup>th</sup> graders
  - 31.0% scored Advanced/Proficient in their math MSA exam. This is an increase of over 11 percentage points.

o 52.0% scored Advanced/Proficient in their reading exam. This is an increase of 11.5 percentage points from 2005.

#### High School Performance

High school students are required to take and pass the High School Assessment exam (HSA). The HSAs are tests that measure school and student progress towards Maryland's High School core learning goals. Students must pass HSA exams in English, biology, government, and algebra in order to graduate. Additional information on the HSA can be found at <a href="http://hsaexam.org">http://hsaexam.org</a>. BNIA-JFI tracks the percentage of high school students that take and pass each of the exams in each school year. The data is normalized by the total number of high school students. Overall, the percentage of students passing the HSA exam decreased for three out of four tests (English, Biology, and Algebra) from 2009 to 2010.

- The percentage of high school students that passed the High School Assessment (HSA) English exam decreased from 38.2% in 2009 to 37.3% in 2010.
- The percentage of high school students that passed the HSA Biology exam decreased from 44.3% in 2009 to 42.7% in 2010.
- The percentage of high school students that passed the HSA Algebra exam decreased from 33.5% in 2009 to 25.9% in 2010.
- The percentage of high school students that passed the HSA Government exam increased from 46.3% in 2009 to 48.8% in 2010.

#### Youth Labor Force Participation 10

BNIA-JFI tracks the percentage of persons aged 16 to 19 who are in school and/or employed.

- The percentage of persons aged 16 to 19 who are either in school and/or employed increased from 81.7% in 2000 to 86.0% in 2010.
- There are six CSAs where 100% of the residents aged 16 to 19 are either in school and/or employed. These CSAs are Dickeyville/Franklintown, Downtown/Seton Hill, Greater Charles Village/Barclay, Highlandtown, Mt. Washington/Coldspring, and North Baltimore/Guilford/Homeland.

#### Youth Civic Engagement

As a measure of youth civic engagement, BNIA-JFI tracks the percentage of persons between 18 and 25 registered to vote and the percentage of persons between 18 and 25 who voted in the general election.

• The percentage of persons aged 18 to 25 who are registered to vote increased from 40.1% in 2002 to 56.9% in 2010.

<sup>&</sup>lt;sup>10</sup> Source for the percentage of youth who are in school and/or employed is the 2006-2010 American Community Survey (ACS).

The percentage of persons aged 18 to 25 that voted in the general election increased from 12.9% in 2002 to 13.7% in 2010.

 $NA = Data \ not \ available \ due \ to \ major \ modifications \ in \ Census \ geographies \ from \ 2000 \ to \ 2010.$ 

<sup>\* 2010</sup> data using new 2010 CSA boundaries. CSA boundaries were modified slightly due to modifications in Census geographies from 2000 to 2010.

## Percent of Population 18-25 that Voted in General Election

The percentage of registered people ages 18-25 (as reported by 2000 and 2010 Census) that voted in the General Election (including absentee ballots).
