

Today's job market requires a higher level of education and skills, placing a greater need for students to remain in school and earn a high school diploma. Over the past several years, Baltimore City has experienced improvements in school and student performance. Since 2005, fewer students withdrew from school, fewer students were chronically absent, more students graduated from high school, and student testing performance has increased. An important indicator tracked by BNIA-JFI, chronic absence, has also decreased over the past few years. Students that are chronically absent have lower graduation rates and are more likely to perform poorly in school. An article in the Baltimore Sun indicated that the decrease in the dropout rate and chronic absenteeism may be linked to the decrease in Baltimore City's juvenile crime rate. Overall, our analysis of Baltimore City Public Schools data found that:

- The percentage of students who withdrew before completion declined by 4.3 percentage points from 2005 to 2009;
- The percentage of students who completed high school increased by nearly 8 percentage points from 20005 to 2009; and
- The chronic absenteeism rate for elementary school students decreased by 2.4 percentage points, the rate for middle school students decreased by 13.8 percentage points, and the rate for high

school students increased slightly (0.4 percentage points) from 2005 to 2009.

These are all important indicators pointing to improving conditions and student performance resulting from the policies and efforts of Baltimore City Schools and its many partners. The

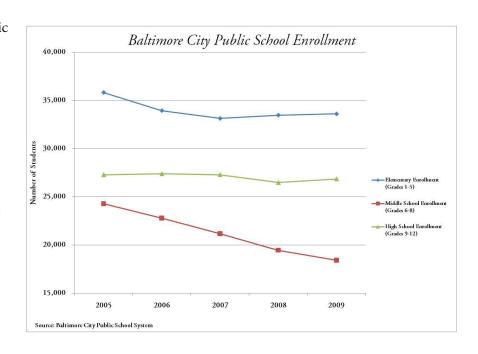

education and youth indicators tracked by BNIA-JFI are described in greater detail below.

<sup>&</sup>lt;sup>1</sup> Green, Erica. The Baltimore Sun. *In Baltimore, more time in school means less juvenile crime.* November 13, 2010.

BNIA-JFI tracks thirty indicators for elementary, middle, and high school students in an effort to measure the educational performance and youth engagement in Baltimore City. These indicators are grouped into the following seven categories: student enrollment and demographics; dropout rate and high school completion; student attendance, suspensions and expulsions; elementary and middle school student achievement; high school performance; high school graduates prepared for higher education and labor force participation; and youth civic engagement. The Baltimore City Public School System provided the Education and Youth Engagement data to BNIA-JFI by the student's home address. Using student address level data allows BNIA-JFI to present data on educational performance by the community in which the student lives, not by the school attended. This allows BNIA-JFI to examine the relationship between community conditions and educational performance.

## Student Enrollment and Demographics

The roughly 200 public schools in Baltimore City Public Schools serve approximately 80,000 students annually. The Baltimore City School system consists of traditional elementary, middle, and high schools, as well as a variety of other school types, which include charter, innovation, transformation, and

selective admission high schools. Since the 2006-2007 school year, total enrollment has begun to stabilize after several years of declining enrollment. BNIA-JFI tracks eight indicators of student enrollment and demographics which provide a base of understanding as to the students attending Baltimore City Public Schools and are also used as the denominator in the various comparisons made in the Vital Signs report.

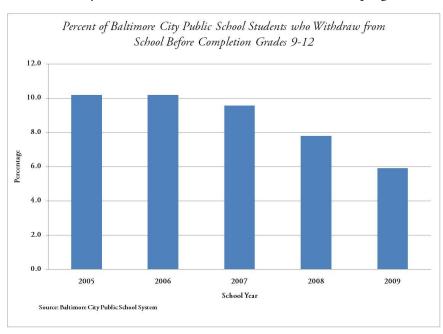

- Total enrollment for elementary and high school students increased from 2008 to 2009. Total enrollment for middle schools students has continued to decline from 2005.
- The majority of students that attend Baltimore City Schools are African American (87.8%). While both the percentage of African American and white students has declined from 2005, the percentage of Hispanic students has increased from 1.8% in 2005 to 3.0% in 2009. It is important to note that according to the 2009 American Community Survey, 25% of the

- children aged 5 to 17 are white, but are only 8% of the total enrollment in public school. We believe that these are a majority of the students attending private schools.
- The percentage of students receiving free/reduced meals increased from 65.5% in 2008 to 70.9% in 2009. This increase may be the result of the City School's aggressive campaign to increase participation in this program.
- The percentage of students who are enrolled in Special Education programs has remained steady, averaging 16.2% from 2005 to 2009.

## Dropout Rate and High School Completion

The City Schools and numerous other partners, including the City government, foundations, and non-profits have focused their efforts on reducing the number of school dropouts and increasing high school completion. For instance, the Baltimore City Schools created the Great Kids Come Back program and

the Family League has dropout prevention as part of its Youth Development Strategy. Reports, studies, and news articles have linked a lower dropout rate and increasing graduation rate to higher wages and economic security, better health outcomes, and reduced criminal activity. A study by the Baltimore City Department of Health found that nearly all of the youths involved in violent

crime from 2002 to 2007 were chronically absent and that well over half had been either suspended or expelled. BNIA-JFI tracks both the dropout rate of students (9<sup>th</sup> through 12<sup>th</sup> grade) and the high school completion rate of Baltimore City Public School Students.

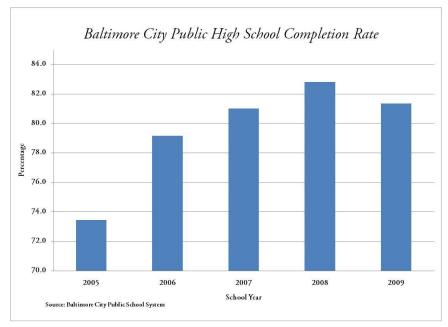

- The percentage of students in grades nine through 12 in Baltimore City who withdrew from school before completion has declined by over four percentage points from 10.2% in 2005 to 5.9% in 2009.
- In 2009, less than 6.0% of high school students withdrew before completion. This is a decrease of nearly 2 percentage points from 2008.

• Since 2005, the percentage of students that withdraw before completion declined in 51 of the 55 CSAs. The decline in the percentage of students that withdraw was greatest in Jonestown/Oldtown (-12.0%), Poppleton/The Terraces/Hollins Market (-11.5%), Southwest Baltimore (-11.5%),

and Washington Village (-10.4%).

The percentage of students in 12<sup>th</sup> grade that received a Maryland high school diploma or equivalent (i.e. certificate/GED) at the end of the year declined slightly from 82.8% in 2008 to 81.4% in 2009.

eight percentage points from 73.4% in 2005 to 81.4% in 2009.

## Student Attendance, Suspensions and Expulsions

The City Schools and its numerous partners have also made increasing student attendance a priority. As an example, Baltimore City Schools in partnership with the Open Society Institute, the Baltimore Education Research Consortium (BERC), and BNIA-JFI, participated in a workgroup focused on identifying the number of chronically absent students, the schools where they are registered to attend, and the neighborhoods impacted by high rates and numbers of chronically absent students. Students that miss significant amounts of school have been shown to have lower student performance, are more likely to drop out, lower graduation rates, and increased behavior problems. A study by the National Center for Children in Poverty found that students who missed at least 10% of days in kindergarten scored lower in reading, math, and general knowledge tests when compared to students who missed fewer days of school.<sup>2</sup> Keeping students in school is essential to increasing graduation rates. This is especially true for keeping elementary school students engaged and attending school. Students who are chronically absent in the early grades are more likely to continue to be chronically absent in later grades and not complete their education. Research by the BERC has found that chronically absent 9th graders had already established poor attendance patterns in earlier school years.<sup>3</sup> BNIA-JFI tracks the chronic absenteeism rate (the percent of students who miss 20 or more school days per year) for elementary

<sup>&</sup>lt;sup>2</sup> http://www.nccp.org/publications/pub\_837.html

<sup>&</sup>lt;sup>3</sup> http://baltimore-berc.org/pdfs/3A%20Final%20report\_06-15-10.pdf

school students, middle school students, and high school students. In addition, BNIA-JFI also tracks the percentage of students who were suspended or expelled during the school year.

- In 2009, almost 3,400 elementary school students were chronically absent. The percentage of elementary school students that were chronically absent decreased from 11.0% in 2008 to 10.1% in 2009. The CSAs with the greatest percentage of chronically absent elementary students were Perkins/Middle East (17.1%), Morrell Park/Violetville (14.3%), Greenmount East (14.2%), and Madison/East End (14.2%).
- In 2009, slightly more than 3,000 middle school students were chronically absent. The percentage of middle school students that were chronically absent decreased from 24.1% in 2008 to 16.3% in 2009. There were 16 CSAs in 2009 where more than one out of every five middle school students were chronically absent with the greatest percentage of chronically absent middle school students residing in Upton/Druid Heights (33.5%).
- In 2009, slightly more than 10,500 high school students were chronically absent. The percentage of high school students that were chronically absent decreased slightly from 40.2% in 2008 to 39.2% in 2009. In 2009, there were 25 CSAs where at least 40% of the high school students missed at least 20 school days, and there were three CSAs where at least one out of every two high school students missed 20 or more school days.
- The percentage of all students who were suspended or expelled during the school year decreased from 9.9% in 2008 to 8.1% in 2009.

## Elementary and Middle School Student Achievement

One way to measure the progress and readiness of students is to examine standardized test scores. Students across the State are required to take the Maryland School Assessment (MSA) test. The MSA is a test of a student's math, reading, and science proficiency. BNIA-JFI tracks the percentage of 3<sup>rd</sup>, 5<sup>th</sup>, and 8<sup>th</sup> graders who score at an advanced or proficient level in reading and math MSA tests. These indicators are normalized by the total student enrollment for each of those grades. Overall, City School students have made significant improvements in their MSA scores with both reading and math scores for 3<sup>rd</sup>, 5<sup>th</sup>, and 8<sup>th</sup> graders increasing.

- The percentage of 3<sup>rd</sup> grade students that scored as being Advanced/Proficient in their Maryland School Assessment math exam in 2009 was 78.3%. This was an increase of almost 22 percentage points from 2005.
- In 2009, 76.9% of 3<sup>rd</sup> graders scored as Advanced/Proficient in their reading exam. This is an increase of nearly 16 percentage points from 2005.
- In 2009, slightly less than three fourths (75.0%) of the 5<sup>th</sup> graders in Baltimore City scored as Advanced/Proficient in their math MSA exam. This is an increase of over 26 percentage points from 2005.

- Over eighty two percent (82.4%) of the 5<sup>th</sup> graders scored as Advanced/Proficient in their reading exam in 2009. The percentage of students who tested as being Advanced/Proficient in their reading exam increased by 26 percentage points from 2005 to 2009.
- The percentage of 8<sup>th</sup> graders who score as Advanced/Proficient in their math MSA exam increased from 28.8% in 2008 to 40.0% in 2009. The percentage of students testing as being Advanced/Proficient has increased by over 20 percentage points from 2005 to 2009.
- In 2009, 61.8% of 8<sup>th</sup> graders scored as Advanced/Proficient in their reading exam. This is an increase of 12 percentage points from 2008 and an increase of 21 percentage points from 2005.

## **High School Performance**

High school students are required to take and pass the High School Assessment exam (HSA). The HSAs are tests that measure school and student progress towards Maryland's High School core learning goals. Students must pass HSA exams in English, biology, government, and algebra in order to graduate. Additional information on the HSA can be found at <a href="http://hsaexam.org">http://hsaexam.org</a>. BNIA-JFI tracks the percentage of high school students that take and pass each of the exams in each school year. The data is normalized by the total number of high school students. Overall, the percentage of students passing the HSA exam decreased for all four tests in 2009.

- The percentage of high school students that passed the High School Assessment (HSA) English exam decreased from 40.4% in 2008 to 38.2% in 2009.
- The percentage of high school students that passed the HSA Biology exam decreased from 49.2% in 2008 to 44.3% in 2009.
- The percentage of high school students that passed the HSA Government exam decreased from 57.1% in 2008 to 46.3% in 2009.
- The percentage of high school students that passed the HSA Algebra exam increased from 37.3% in 2008 to 33.5% in 2009.

# High School Graduates Prepared for Higher Education and Labor Force Participation

BNIA-JFI tracks four indicators that measure the preparedness of high school graduates for higher education and participation in the labor force: the percentage of students that successfully complete courses qualifying them to enter the University of Maryland; the percentage of graduates that complete Career/Technical education training programs; the percentage of graduates that compete both of these advanced programs; and the percentage of persons aged 16 to 19 that are in school and/or employed.

The percentage of Baltimore City public school students that successfully completed courses qualifying them to enter the University of Maryland increased from 72.3% in 2008 to 74.3% in 2009. Since 2005, the percent of students that successfully completed these courses has increased by over nine percentage points.

- The percentage of Baltimore City students that graduated and successfully completed courses in Career/Technical Education (CTE) programs increased slightly from 6.2% in 2008 to 6.9% in 2009. These programs are important in that they provide real world, hands on training and experience for students pursuing a career.
- Slightly less than seventeen percent (16.7%) of Baltimore City high school students that graduated in 2009 successfully completed both CTE programs and entrance courses for the University of Maryland. This percentage has decreased from 23.1% in 2005.

## Youth Civic Engagement

As a measure of youth civic engagement, BNIA-JFI tracks the percentage of persons between 18 and 25 registered to vote and who voted in the general election.

- The percentage of persons aged 18 to 25 who are registered to vote increased from 40.1% in 2002 to 72.9% in 2008.
- The percentage of persons aged 18 to 25 that voted in the general election increased from 12.9% in 2002 to 47.1% in 2008.
