Census Demographics

The United States Bureau of the Census collects a wide variety of social, demographic, and housing information on both persons and households across the United States. The Bureau of the Census administers both a decennial Census and the American Community Survey (ACS). Prior to 2010, the Census administered both a long- and short-form decennial Census which was used to collect detailed information on

residents of the United States. Starting with the 2010 Census, only a short-form Census was administered and the long-form was replaced by the ACS. The ACS is an ongoing, continuous survey that is used to collect data once supplied by the Census long-form. Information for the City of Baltimore is now available on an annual basis from the ACS, but community-level information is aggregated over 5-years of data collection. In Vital Signs 10, indicators were calculated using the 5-year average from the 2006-2010 ACS data. Since the Census longform and the 5-year ACS represent different sampling methodologies, the indicators generated from them are not directly comparable; therefore, throughout Vital Signs 10, 2010 indicators generated from the 2006-2010 ACS will be noted.

The Census and ACS represent the best data for looking at how Baltimore City and its neighborhoods have changed 2000 to 2010.

BNIA-JFI analyzed data from the Census to provide greater understanding of the socioeconomic and demographic characteristics of the residents of the City and its neighborhoods. BNIA-JFI also used this data as denominators for many of the Vital Signs indicators allowing for data to be normalized and rates to be computed. Census data analyzed by BNIA-JFI is grouped into the following categories: population, race and ethnicity; households and families; and income. Highlights of the data from 2010 are provided below.

Population

From 2000 to 2010, Baltimore City continued to lose residents but managed to experience a slowing of the decrease in population. Additionally, while the City as a whole has continued to lose population, there was variation between neighborhoods, with some growing in population significantly.

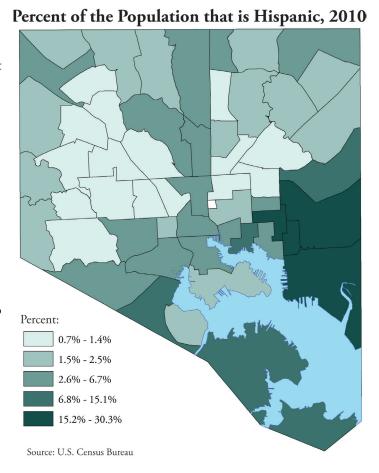

- From 2000 to 2010, Baltimore City's population has declined by 4.6%, decreasing from 651,154 to 620,961 persons.
- A total of 19 CSAs experienced an increase in population with the largest increases occurring in Downtown/Seton Hill (35.2%), Canton (15.5%), Cross-Country/Cheswolde (10.5%), and South Baltimore (8.9%).
- Of the 34 CSAs that experienced a decline in population, the largest decreases occurred in Greenmount East (-29.2%), Clifton-Berea (-21.0%), and Midway/Coldstream (-20.4%).

Race and Ethnicity

BNIA-JFI tracks several indicators that help describe the residents of Baltimore's neighborhoods. These include total population and population by race, and ethnicity. While overall the City has continued to lose population, there was variation between neighborhoods with some growing in population significantly. Additionally, there was growth in the percentage of Hispanic residents in several east Baltimore neighborhoods that have become important gateway communities and will be important to moving towards

the City's goal of increasing its population base. The Racial Diversity Index, an indicator that measures the degree of racial diversity in an area (but does not indicate which race is predominate in an area), increased overall for the City indicating a greater level of racial diversity in Baltimore's neighborhoods.

- African American residents in Baltimore City outnumber residents of all other races by nearly 2:1. The percentage of the City's population that is African American decreased from 64.0% in 2000 to 63.7% in 2010.
- There are currently 36 CSAs where at least half of the residents living in the neighborhood that are African American and 18 where at least 9 of every 10 residents are African American.

- The percentage of white residents decreased slightly from 31.0% to 29.6% from 2000 to 2010. There are 15 CSAs where at least half of the neighborhood's residents are white and only one CSA (South Baltimore) where 90% or more of the residents are white.
- From 2000 to 2010, the percentage of Hispanic residents in Baltimore City increased from 1.7% to 4.2%. While only one CSA (Fells Point) experienced a decline in the percentage of Hispanic residents, five CSAs experienced increases in the percentage of Hispanic residents over 10%. These include: Orangeville/East Highlandtown (26.6%), Southeastern (15.9%), Patterson Park North and East (14.5%), Highlandtown (14.1%), and Westport/Mt. Winans/Lakeland (11.2%).
- From 2000 to 2010, the percentage of Asian residents in Baltimore City increased from 1.5% to 2.3%. Baltimore's Asian population is heavily concentrated in two CSAs, Downtown/Seton Hill (16.0%) and Greater Charles Village/Barclay (13.5%).
- There is 37 CSAs where the percentage of residents who are Asian is less than the City average and of these, 23 CSAs have less than 1.0% of the residents being Asian.
- In 2010, twenty four of the CSAs were over 40% racially diverse.
- The racial diversity index increased from 2000 to 2010 (meaning the neighborhoods became more racially diverse) in forty-eight CSAs, with the greatest increases experienced in Orangeville/East Highlandtown, Highlandtown and Morrell Park/Violetville.

Sex and Age of Residents

Information on the sex and age of residents is important in knowing the mixture of potential services that may be needed within a community. Overall, the City lost more females than males between 2000 and 2010, and the age distribution of the City increased significantly for persons aged 45 to 65.

- In 2010, 52.9% of the City's population was female, down from 53.3% in 2000.
- While there was a decrease in the number of males and females in Baltimore City from 2000 to 2010, the number of females decreased by over 1.6 times the number of males.
- From 2000 to 2010, the percentage of the City's residents aged 0 to 17 (youth) decreased by 3.3 percentage points from 24.8% to 21.5%. The CSAs with the greatest percentage point decreases were South Baltimore (-9.1) and Patterson Park North and East (-8.9).
- The percentage of the City's residents aged 18 to 24 (college-aged) decreased from 14.8% in 2000 to 12.6% in 2010. While the overall percentage declined, several areas (especially those near colleges and universities) experienced an increase in the percentage of residents aged 18 to 24.
- From 2000 to 2010, the percentage of the City's residents aged 25 to 44 (young adults) decreased by one percentage point from 29.9% in 2000 to 29.0% in 2010. The CSAs with the greatest percentage point decreases were Greenmount East (-6.1) and Howard Park/West Arlington (-5.1).
- The City experienced gains in the percentage of residents aged 45 to 64 (working adults) from 17.3% in 2000 to 25.2% in 2010. The percentage of residents aged 45 to 64 increased in 46 CSAs from 2000 to 2010.
- While the percentage of older adults (persons aged 65 and over) decreased slightly from 13.2% in 2000 to 11.7% in 2010, fourteen CSAs experienced an increase in the percentage of their residents over the age of 65 including the Waverlies and Northwood.

Households and Families

BNIA-JFI also tracks several indicators of households in Baltimore City reflecting the composition of the residents living together. From 2000 to 2010, while the City's number of households has decreased, particular areas of the City have experienced growth mostly due to the development of new housing stock.

- The number of households in Baltimore City declined by 3.0% from 257,996 in 2000 to 249,903 in 2010.
- Despite the declining number of total households, several CSAs experienced increases in the number of households. The CSAs with the greatest increases included Downtown/Seton Hill (66.8%), South Baltimore (21.0%), and Canton (15.5%).
- The average household size in Baltimore City decreased slightly from 2.46 persons per household in 2000 to 2.44 persons per household in 2010.
- The percentage of families with related children living in the household decreased from 32.0% in 2000 to 27.9% in 2010.

Income1

Baltimore City's median household income grew by nearly 28% from 2000 to 2010. It is important to note that the 2010 data is from the American Community Survey and captures incomes from 2006 to 2010 and is not directly comparable to the 2000 Census data and that the income figures are not adjusted for inflation. Despite this increase in overall household income, Baltimore remains a City of differences with some neighborhoods having very few households with significant incomes and other neighborhoods with large numbers of households with low earnings.

- Baltimore City's median household income (in current dollars) increased by 27.5% from \$30,078 in 2000 to \$38,346 in between the years 2006-2010.
- The CSAs with the greatest median household income during the years 2006-2010 are Greater Roland Park/Poplar Hill (\$96,854), Mt. Washington/Coldspring (\$79,127), and Inner Harbor/Federal Hill (\$77,888).
- During the years 2006-2010, the CSAs with the lowest median household income are Upton/Druid Heights (\$13,811), Oldtown/Middle East (\$15,415), and Cherry Hill (\$18,606).
- Nearly 35% of the City's households earn less than \$25,000 annually, 18% earn between \$25,000 and \$40,000, 17% earn between \$40,000 and \$60,000, 9% earn between \$60,000 and \$75,000, and 22% earn more than \$75,000 annually.
- The CSAs with the greatest percentage of households earning less than \$25,000 annually include Upton/Druid Heights (66.5%), Oldtown/Middle East (60.6%), and Cherry Hill (59.3%).
- The CSAs with the greatest percentage of households earning more than \$75,000 annually include Greater Roland Park/Poplar Hill (60.8%), Inner Harbor/Federal Hill (52.4%), and Canton (49.9%).
