Report design by Zak Bickel

ustainability¹ takes on various meanings in Baltimore's diverse communities, but in an effort to provide a common framework, in 2009 the City of Baltimore adopted the five year Baltimore Sustainability Plan to increase community engagement in stewardship of its own social, environmental, and economic future. The strategies for creating a sustainable future include improving the cleanliness of the city, preventing pollution, conserving important resources such as energy and water, greening the city through planting trees and establishing local food systems, improving public transport and facilitating alternate transportation such as bicycling, raising environmental awareness through education, and "greening" the economy by supporting green and local businesses in Baltimore.²

#### Based on the implementation of strategies in

the plan, Baltimore received a top 5-STAR rating from STAR communities for efforts to become a more sustainable city. The rating was based on high marks for strong neighborhood culture and the Baltimore Neighborhood Indicators Alliance was mentioned as a key program contributing to community improvement through the *Vital Signs* report that tracks a number of indicators that highlight the City's progress.

Looking back at data from the past five years, we can see that Baltimore City saw some significant improvements in its sustainability goals. From 2010 to 2014, the rate of 311 calls for dirty streets

and alleys dropped from 75.6 per 1,000 residents to 52.8 per 1,000 residents. In the years 2013 and 2014, the City planted 11,379 trees. From 2010 to 2014, there were 6,028 homes weatherized, or 3.0% of the total number of residential properties in 2014. For public engagement, the percent of the population over the age of 18 that voted in the general election rose from 18.6% in 2010 to 28.7% in 2014. As the next five year plan is implemented, the indicators that *Vital Signs* tracks will continue being important for measuring the City's progress.

In Vital Signs 14, a total of 23 indicators for Community Statistical Areas (CSAs)<sup>3</sup> track the City's progress towards sustainability. These indicators are grouped into the following categories: sanitation, transportation, green space and water use, energy and weatherization, and community engagement.

### **Data**

Data for *Vital Signs 14* Sustainability indicators comes from sources that can be grouped into the following categories:

- 1 In 1987, the UN Brundtland Commission defined sustainable development as "meeting the needs of the present without compromising the ability of future generations to meet their own needs."
- Baltimore Commission on Sustainability (2009) The Baltimore Sustainability Plan. www.baltimoresustainability.org/plans/sustainability-plan
- 3 CSAs are groups of census tracks that correspond to neighborhoods. See *Vital Signs 14* Introduction

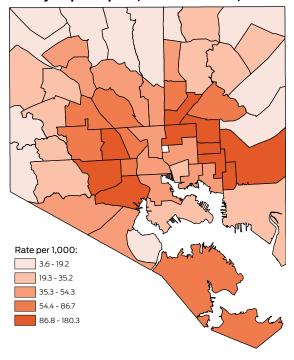

- City sources: CitiStat/Baltimore 311, Department of Public Works, Department of Parks and Recreation, TreeBaltimore, Board of Elections
- *State sources*: Maryland Department of Housing and Community Development
- Federal sources: American Community Survey
- Proprietary sources: Walk Score®

When possible, indicators are created by normalizing data by population or the number of residential properties to establish rates that allow for comparison across neighborhoods and over time.

### **Sanitation**

When Baltimore residents were surveyed about what sustainability issue was most important to them, sanitation or cleanliness rose to the top as an important component of quality of life. Vital Signs 14 continues to track two indicators that measure the cleanliness of Baltimore City: the rate of dirty streets and alleys and the rate of clogged storm drains. Data originates from calls for service requests, which occur when residents, employees of businesses, City employees, or anyone calls the City's 311 line, utilizes the new 311 mobile phone application, or files a request for service on the City's website to report a wide variety of incidents or problems ranging from piles of trash to broken streetlights to potholes to broken equipment at a public park.

#### Rate of Dirty Street and Alley Reports per 1,000 Residents, 2014

• The rate of reported dirty streets and alleys from 2013 to 2014 remained relatively stable, with 52.5 per 1,000 residents in 2013 and 52.8 per 1,000 in 2014. In 2014, the CSAs with the highest rates of reported dirty streets and alleys included Washington

- Village (180.3 per 1,000 residents), Patterson Park North & East (162.5 per 1,000 residents), and Midway/Coldstream (135.2 per 1,000 residents). The CSAs with the <a href="lowest">lowest</a> rates of reported dirty streets and alleys included Cross-Country/Cheswolde (3.6 per 1,000 residents), Dickeyville/Franklintown (3.9 per 1,000 residents), and Cherry Hill (8.2 per 1,000 residents).
- Between 2013 and 2014, the rate of reported clogged storm drains decreased from 6.2 per 1,000 residents in 2013 to 3.2 per 1,000 residents in 2014. In 2014, the CSAs with the highest rates of reported clogged storm drains included Washington Village (11.8 per 1,000 residents), Greater Roland Park/Poplar Hill (10.2), and Downtown/Seton Hill (7.0 per 1,000 residents). The CSAs with the lowest rates of reported clogged storm drains included Cherry Hill (0.9 per 1,000 residents), Greater Charles Village/Barclay (0.9 per 1,000 residents), and Cross-Country/Cheswolde (1.2 per 1,000 residents).

### **Transportation**

Urban living often means having access to alternative means of transportation that reduce vehicle miles traveled by car. Baltimore's mid size transportation system includes regional rail (MARC), metro, light-rail, the Charm City Circulator, and a system of local and commuter buses. While transportation is robust for move-

## Data Story: The Relationship between Travel Time to Work and Population Decline

Although the Vital Signs report provides more than 100 quality of life indicators for every neighborhood in Baltimore, perhaps the most fundamental indicators of community health are those of population growth or decline. Stability or growth in population means that new residents are attracted to a neighborhood because of the housing, schools, or other urban amenities. For a city like Baltimore, that has experienced more than six decades of population decline, most media reports suggest the main reasons stem from high crime or poor quality education. Research by BNIA-JFI has shown that at the neighborhood level, the indicator that is the strongest correlation to population decline is long commute times, particularly travel time to work over 45 minutes.

The impact on urban neighborhoods of long commute times is twofold. Chances are high for an employed resident to move closer to a job more than 45 minutes away, as the negative correlation to population growth implies; conversely, chances are high for a worker to not keep a job and become unemployed. Neither outcome contributes to the quality of life in the neighborhood itself.

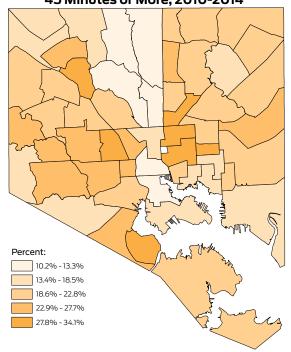

The neighborhoods with the highest percentage of people traveling more than 45 minutes to work are Sandtown-Winchester/Harlem Park (34.1%), Madison/East End (34.0%), and Oldtown/Middle East (30.3%). Longer commutes can be a barrier to reliably getting to work on time particular when relying on public transportation. These CSAs are also mostly the same ones with the highest percentage of residents who use public transportation to get to work: Sandtown-Winchester/Harlem Park (43.7%), Madison/East End (40.2%), and Greenmount East (39.7%).

For a neighborhood to "compete" for new residents and jobs in the regional context, it must have locational advantages that meet the needs of people living there. In our increasingly interconnected region, that advantage may not mean that every neighborhood has to have all amenities, but rather everyone living in any neighborhood should be able to access amenities that

may be located anywhere in the region, like a job or shopping centers or transportation hubs. Accessibility for everyone in every neighborhood is the key to regional equity in the 21st century; policies and programs that consider both people and the places being impacted can help bridge the gap in access.

### Percent of Employed Population with Travel Time to Work of 45 Minutes or More, 2010-2014

ment north and south, problems with accessibility still persist in movement east and west (see Data Story). In addition, recent research has shown that "walkability" is necessary for cities to thrive and that where transit use is high, so too is walking and/or biking. Vital Signs 14 tracks several indicators that measure use of alternative transportation, travel time to work, Walk Score®, and zero vehicle households.

Based on the 2010-2014 ACS, modes of transportation used for commuting to work varied across Baltimore.

- 62.1% of Baltimore City residents drove alone to work. The CSAs with the <u>highest</u> percentage of residents who drove alone to work included Mt. Washington/Coldspring (82.2%), Canton (81.7%), and South Baltimore (80.0%). The CSAs with the <u>lowest</u> percentage of residents who drove alone to work included Oldtown/ Middle East (33.1%), Harbor East/Little Italy (33.3%), and Madison/East End (38.7%).
- 18.7% of Baltimore City residents used public transportation to commute to work in 2014. The percentage of residents who used public transportation ranged from a <u>high</u> of 44.2% in Sandtown-Winchester/ Harlem Park to a low of 4.1% in Canton.
- Between the years 2010-2014, 10.1% of Baltimore City residents used carpools to travel to work. The percentage of residents who use carpools ranged from a <u>high</u> of

- 22.1% in Orangeville/East Highlandtown to a low of 4.6% in Downtown/Seton Hill.
- For Baltimore City, 6.9% of residents walked to work during 2010 to 2014. The percentage of residents who walked to work ranged from a <u>high</u> of 32.9% in Downtown/Seton Hill to a <u>low</u> of 0.0% in Mt. Washington/Coldspring.
- 2.2% of Baltimore City residents used an alternate mode of transportation to get to work (bicycle, motorcycle, and other). The percentage of residents using an alternate mode of transportation ranged from a <u>high</u> of 7.1% in The Waverlies to a low of 0.1% in Dorchester/Ashburton.
- The choice of transportation is correlated to access to a personal car, and based on the 2010-2014 ACS, 30.0% of the households in Baltimore City did not have a vehicle available for personal use. The percentage of households without a vehicle ranged from a <a href="https://nichol.org/high.nc/high.nc/">high of 71.6%</a> in Oldtown/Middle East to a <a href="https://nichol.org/">households without a vehicle ranged from a <a href="https://nichol.org/high.nc/">high of 71.6%</a> in Oldtown/Middle East to a <a href="https://nichol.org/">households without a vehicle ranged from a <a href="https://nichol.org/high.nc/">high of 71.6%</a> in Oldtown/Middle East to a <a href="https://nichol.org/">households without a vehicle ranged from a <a href="https://nichol.org/">high of 71.6%</a> in Oldtown/Middle East to a <a href="https://nichol.org/">house house h

Based on the 2010-2014 ACS, travel times to work varied across the city:

• 17.0% of the City residents that commuted to work had a commute of less than 15 minutes. The percentage of residents who with a commute of less than 15 minutes ranged from a high of 35.3% in Harbor East/Little Italy to a low of 6.5% in Forest Park/Walbrook.

- 38.7% of the City residents that commuted to work had a commute of between 15 and 29 minutes. The percentage of residents who with a commute of between 15 and 29 minutes ranged from a high of 48.6% in North Baltimore/Guilford/Homeland to a low of 18.9% in Oldtown/Middle East.
- 24.3% of the City residents that commuted to work had a commute of between 30 and 44 minutes. The percentage of residents who with a commute of between 30 and 44 minutes ranged from a <a href="https://linearch.nigh.com/high-ch/4">https://linearch.nigh.com/high-ch/4</a> in North Baltimore/Guilford/Homeland.
- 20.0% of City residents that commuted to work had a commute greater than 45 minutes. The percentage of residents with a commute greater than 45 minutes ranged from a <u>high</u> of 34.1% in Sandtown-Winchester/Harlem Park to a low of 10.2% in Downtown/Seton Hill.

### **Green Space and Water Use**

Baltimore City is home to many green spaces, parks, and waterways. Some of the more widely recognized locations include the Inner Harbor, Middle Branch, Druid Hill, Gwynns Falls, and Herring Run Parks. City residents in particular value access to green spaces as a place to recreate, exercise, and congregate, but the City's green spaces also serve a vital role in ensuring clean air and water for long-term urban sustainability. Baltimore neighborhoods

actively participate in increasing access to green spaces through tree planting and other watershed protection activities such as stream cleanups. These efforts not only provide public health benefits but directly impact water quality in the City, region, and ultimately the entire Chesapeake Bay. Vital Signs tracks four indicators that represent tree canopy, number of trees planted, community managed open spaces, and water use.

- In 2007, when data was last available, 27.5% of the City's total land area was covered with trees. By CSA, this figure ranges from a <a href="high-quadra">high</a> of 72.1% in Dickeyville / Franklintown to a low of 3.2% in Highlandtown.
- In 2014, there were 5,185 trees planted in Baltimore. The CSAs with the highest number of trees planted included Cherry Hill (369), Westport/Mount Winans/Lakeland (326), and Brooklyn/Curtis Bay/Hawkins Point (304). Three CSAs had no trees planted: Dickeyville/Franklintown, Pimlico/Arlington/Hilltop, and Southeastern. The CSAs with the lowest number of trees planted were Hamilton (4), Harbor East/Little Italy (4), and Midway/Coldstream (6).

The City of Baltimore has more than 18,000 vacant lots that could be converted into uses that enhance neighborhoods and promote resiliency and sustainability. In order to help neighborhood stakeholders identify greening strategies for these vacant lots, the Baltimore Urban Waters Partnership developed

the Green Pattern Book that provides guidance on ways to increase green amenities, including community managed open spaces used for a variety of activities from gardening to horseshoe throwing.<sup>7</sup>

In 2014, there were 813 community managed open spaces in Baltimore City. The CSAs with the <u>largest</u> number of community managed open spaces included Greenmount East (136), Southwest Baltimore (101), and Upton/Druid Heights (106). There were eight CSAs with <u>zero</u> spaces: Lauraville, Hamilton, Greater Roland Park/Poplar Hill, Cross-Country/Cheswolde, Claremont/Armistead, Chinquapin Park/Belvedere, Canton, and Beechfield/Ten Hills/West Hills.

Data on water consumption in 2011 from the Department of Public Works show that—on average—areas of the City with a lot of commercial properties as well as areas with larger-lot residential properties consume more water on a daily basis.

 In 2011, when data was last available, the median daily average water consumption for Baltimore City was 16 cubic feet of water. There were seven CSAs with median daily water consumption <u>greater</u> than or equal to the City median: Downtown/Seton Hill, Claremont/Armistead, Cross-Country/Cheswolde, Greater Roland Park/ Poplar Hill, Midtown, Forest Park/Walbrook, and North Baltimore/Guilford/Homeland.

### **Energy and Weatherization**

One of the biggest issues that has gained importance for neighborhoods over the past decade is the use, conservation, and cost of residential energy. Research has shown that programs aimed at providing incentives for installing devices in the home to reduce consumption (compact fluorescent light bulbs, smart meters, energy saving appliances) or provide education on energy efficient practices impact the entire neighborhood through greater residential stability and investment.<sup>8</sup>

- Based on the 2010-2014 ACS, nearly two-thirds (64.7%) of the City's residences was heated using utility gas. The percentage of residences heated by utility gas ranged from a high of 79.4% in Claremont/Armistead to a low of 26.5% in Downtown/Seton Hill. There were six other CSAs where at least 75% of the residences were heated using utility gas: Forest Park/Walbrook (79.3%), Hamilton (77.8%), Greater Rosemont (77.6%), Lauraville (75.3%), Southeastern (75.1%), and Dorchester/Ashburton (75.0%).
- Over a quarter (26.6%) of the City's residences was heated using electricity. The percentage of residences heated by electricity ranged from a <a href="https://linear.night.

Weatherization assistance programs (WAP)<sup>9</sup> in the U.S. had received funding at levels needed

# **Data Story: Energy Efficiency**

# Measures for Non-Profits

As part of the 2012 Constellation Energy Group and Exelon Corporation merger, the Maryland Public Service Commission required that \$54 million be set aside for a customer investment fund for Baltimore City that focused on weatherization efforts. energy efficiency programs, and financial aid for low-income electricity customers. From this, the Baltimore Energy Initiative (BEI) was formed, which consists of multiple city agencies working to bolster energy efficiency and reduce energy insecurity in the city.

One part of this initiative is the Energy Retrofit Loans and Grants to Non-profit Agencies Serving Lowincome Families program, which is administered by the Baltimore City Office of Sustainable Energy (OSE). This program provides low-interest loans and grants to nonprofit organizations who serve the City's most vulnerable populations: persons who are homeless; persons with mental, physical, or developmental disabilities; persons with substance use disorders; persons diagnosed with HIV and AIDS; and persons with other special needs.

During fiscal years 2014 and 2015, OSE provided funding to 31 facilities to implement energy efficiency measures as well as providing technical assistance and energy education to directors, facility managers, and maintenance staff of these buildings. These upgrades have resulted in an estimated annual energy savings of 809,000 kWh for the 31 facilities. Beyond these energy savings, this investment has substantially raised the quality of life by providing better lighting and more comfortable temperature control through the installation of new heating and cooling systems.

As the BEI program moves into its third year, the Office of Sustainable Energy will continue to work with City nonprofit organizations to provide energy-efficient and quality of life upgrades to facilities serving some of our most in-need city residents.

Micah House, which serves homeless citizens by providing housing and social services, received a loan for energy efficient lighting and appliances to improve the quality of life for its residents.

Photo: Brandon Nida

for emergency management until significant budget increases were passed as part of the 2009 American Reinvestment and Recovery Act (ARRA). In states like Maryland, more homes received weatherization services between 2009-2012 than in the entire previous decade, according to the Maryland Department of Housing and Community Development (DHCD) that oversees administration of these programs. This implies that weatherization is not only an important tool for reducing energy use, but also increasingly an important part of housing investments in many neighborhoods.

- Data from DHCD shows that the percentage of residential properties in Baltimore City that were weatherized decreased from 0.48% in 2013 to 0.27% in 2014. The number of residential properties weatherized in 2014 totaled 543.
- In 2014, the CSAs that had the greatest percentage of homes weatherized were Allendale/Irvington/S. Hilton (2.3%), Greenmount East (2.2%), and Beechfield/ Ten Hills/West Hills (1.2%). There were eleven CSAs with zero percentage of homes that were weatherized during the year.

### **Community Engagement**

Vital Signs continues to track the percentage of persons registered to vote and the percentage of persons actually voting in the general election as indicators to measure community

engagement. With 2014 being the most recent general election, the data is as follows:

- In 2014, 76.9% of the City residents over the age of 18 were registered to vote which is a slight increase from 2012 (74.7%). The percentage of residents over the age of 18 who were registered to vote ranged from a high of 94.5% in Mt. Washington/Coldspring to a low of 53.0% in Greater Charles Village/Barclay. Two more CSAs had at least 90% of the residents over the age of 18 were registered to vote: Edmondson Village (92.8%) and South Baltimore (92.5%).
- In 2014, only 28.7% of City residents voted in the general election, versus 51.5% in 2012 and 44.4% in 2010. The percentage of residents voting in the general election ranged from a high of 37.2% in Lauraville to a low 1.9% in Dickeyville/Franklintown.

### From Previous Vital Signs:

The City of Baltimore adopted a Bike Master Plan in 2006, and has been actively implementing physical improvements to ensure greater safety for cyclists.

• In 2012, when the last year of data was available, there were 127.0 miles of bike lanes, sharrows and/or paths in Baltimore City. The CSAs with the greatest number of bike infrastructure miles were Greater Charles Village/Barclay (9.2) and Midtown (8.4). Seven CSAs have zero bike miles (Dickeyville/Franklintown,

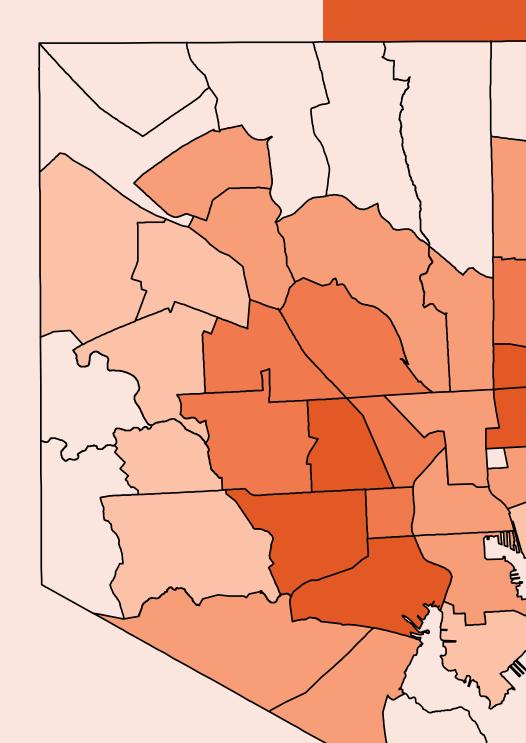

Edmondson Village, Greater Mondawmin, Greater Rosemont, Harford/Echodale, Lock Raven and Morrell Park/Violetville)

Baltimore City had a Walk Score of 52.4, according to data received from Walk Score® in 2011. Because 2011 is the last year data has been received for the Walk Score, data from that year is being used for *Vital Signs 14*. The 2011 Walk Score of 52.4 places the City as whole in the "somewhat walkable" category having some amenities within walking distance.

- Five CSAs were ranked as being a "walkers' paradise" (having a Walk Score greater than 90) including Downtown/ Seton Hill, Fells Point, and Midtown.
- 17 CSAs were ranked as "very walkable" (having a Walk Score between 70 and 90) including Greater Charles Village/ Barclay, Canton, Penn North/Reservoir Hill, and Washington Village.
- 18 CSAs were ranked as "somewhat walkable" (having a Walk Score between 50 and 70) including Belair-Edison, Lauraville, North Baltimore/Guilford/ Homeland, and Edmondson Village.
- 15 CSAs were ranked as being "car dependent" (having a Walk Score less than 50) including South Baltimore, Mt. Washington/Coldspring, and Brooklyn/Curtis Bay/Hawkins Point.

<sup>(</sup>On previous page) The Weatherization Assistance Program helps eligible low-income households lower their energy costs by increasing the energy efficiency of their homes. while ensuring their health and safety. Priority is given to homeowners who are elderly, disabled, and families with children and/or who have high energy consumption This indicator is calculated by dividing the total number of registered voters from the Baltimore City Board of Elections by the total population from the 2010 US Census

Sustainability: Indicator Definitions and Rankings

For each indicator reported in *Vital Signs 14*, we provide the data source, the years for which it is reported, and the five CSAs with the highest and lowest values for the indicator; these may not correspond to positive or negative trends.

### **Transportation**

### Percent of Population Driving Alone to Work

Measures the share of workers that commute alone by car to their job.

Definition: The percentage of commuters driving alone out of all commuters aged 16 and above.

(SOURCE: AMERICAN COMMUNITY SURVEY, 2010-2014)

### **Five Highest:**

- 1. Mt. Washington/Coldspring
- 2. Canton
- 3. South Baltimore
- 4. Greater Roland Park/Poplar Hill
- 5. Harford/Echodale

### **Five Lowest:**

- 1. Oldtown/Middle East
- 2. Harbor East/Little Italy
- 3. Madison/East End
- 4. Greenmount Fast
- 5. Sandtown/Winchester

# Percent of Population Carpooling to Work

Measures the share of workers that commute by carpool to their work.

Definition: The percentage of commuters that carpool out of all commuters aged 16 and above.

(SOURCE: AMERICAN COMMUNITY SURVEY, 2010-2014)

### **Five Highest:**

- 1. Orangeville/East Highlandtown
- 2. Westport/Mount Winans/Lakeland

- 4. North Baltimore/Guilford/Homeland
- 5. Greater Charles Village/Barclay

# Walk Score® (From Vital Signs 11)

### Measures the walkability (convenience to various amenities) of an area.

Definition: The Walk Score® is calculated by mapping out the distance to amenities in nine different categories (grocery stores, restaurants, shopping, coffee shops, banks, parks, schools, book stores/libraries, and entertainment) and are weighted according to importance. The distance to a location, counts, and weights determine a base score of an address, which is then normalized to a score from 0 to 100. More information on Walk Score can be found at www.walkscore.com/.

(SOURCE: WALK SCORE®, 2011)

### **Five Highest:**

- . Downtown/Seton Hill
- 2. Harbor East/Little Italy
- 3. Fells Point
- 4. Midtown
- 5. Inner Harbor/Federal Hill

### **Five Lowest:**

- 1. Dickeyville/Franklintown
- 2. Brooklyn/Curtis Bay/Hawkins Point
- 3. Southeastern
- 4. Claremont/Armistead
- 5. Mt. Washington/Coldspring

# Bike Lane Miles (From Vital Signs 12)

### Measures the linear miles of designated bike lanes within the roadway system.

Definition: BikeBaltimore is the Department of Transportation's bike program and includes incorporating cycling in many transportation projects, installing bike racks, and coordinating cycling events. This indicator measures the amount of linear miles of designated bike lanes in each CSA.

(SOURCE: BIKEBALTIMORE – DEPARTMENT OF TRANSPORTATION, 2012)

### **Five Highest:**

- 1. Downtown/Seton Hill
- 2. Harbor East/Little Italy
- 3. Fells Point
- 4. Midtown
- 5. Inner Harbor/Federal Hill

### **Five Lowest:**

Seven CSAs did not have any bike lanes.

### **Energy and Weatherization**

# Percent of Homes Heated by Utility Gas

#### Measure of homes that use utility gas for heat.

Definition: The percentage of homes that use utility gas for heat and cooking out of all homes.

(SOURCE: AMERICAN COMMUNITY SURVEY, 2010-2014)

### **Five Highest:**

- Claremont/Armistead
- 2. Forest Park/Walbrook
- 3. Hamilton
- 4. Greater Rosemont
- 5. Lauraville

### **Five Lowest:**

- Downtown/Seton Hill
- 2. Midtown
- 3. Harbor East/Little Italy
- 4. Inner Harbor/Federal Hill
- 5. Oldtown/Middle East

# Percent of Homes Heated by Electricity

#### Measure of homes that use electricity for heat.

Definition: The percentage of homes that use electricity for heat and cooking out of all homes.

(SOURCE: AMERICAN COMMUNITY SURVEY, 2010-2014)

### **Five Highest:**

- Downtown/Seton Hill
- Midtown
- 3. Inner Harbor/Federal Hill
- 4. Oldtown/Middle East
- 5. Fells Point

### **Five Lowest:**

- 1. Hamilton
- 2. Lauraville
- 3. Forest Park/Walbrook
- 4. Greater Rosemont
- 5. Belair-Edison

# Percent of Residential Properties Weatherized

### Measure of residential weatherization to increase energy efficiency and safety.

Definition: The percentage of residential properties that were eligible for and received weatherization assistance such as air sealing or furnace replacements during the year. The Weatherization Assistance Program helps eligible low-income households lower their energy costs by increasing the energy efficiency of their homes, while ensuring their health and safety.

(SOURCE: MARYLAND DEPARTMENT OF HOUSING AND COMMUNITY DEVELOPMENT, 2011, 2012, 2013, 2014; U.S. CENSUS, 2010)

### **Five Highest:**

- 1. Allendale/Irvington/S. Hilton
- 2. Greenmount East
- 3. Beechfield/Ten Hills/West Hills
- 4. Upton/Druid Heights
- 5. Edmondson Village

### **Five Lowest:**

Eleven CSAs had zero percent of homes eligible for and/or receiving WAP services.

### **Green Space and Water Use**

# Percent of Area Covered by Trees (From Vital Signs 11)

#### Measure of tree canopy in an area.

Definition: The percentage of total land area composed of tree canopy. The primary sources for this land cover laver were 2004 pan-sharpened 1m Ikonos satellite imagery, a normalized Digital Surface Model (nDSM) derived from 2006 LiDAR data, and LiDAR intensity data resulting from the 2006 acquisition. Other sources of data include the City's planimetric GIS database (building footprints and road casing polygons). The land cover classification was performed using automated object-based image analysis (OBIA) techniques in Definiens Developer/eCognition Server. No accuracy assessment was conducted, but the dataset was thoroughly reviewed at a scale of 1:2000. Over 370 corrections were made to the classification...

(ANALYSIS BY: UNIVERSITY OF VERMONT SPATIAL ANALYSIS LAB. DATA CURRENT AS OF 2007)

### **Five Highest:**

- 1. Dickeyville/Franklintown
- 2. Mt. Washington/Coldspring
- 3. Greater Roland Park/Poplar Hill
- 4. Edmondson Village
- 5. Forest Park/Walbrook

### **Five Lowest:**

- 1. Highlandtown
- 2. Southeastern
- 3. Patterson Park North & East
- 4. South Baltimore
- 5. Madison/Fast End

### Number of Community Managed Open Spaces

### Measures of community managed open spaces in an area.

Definition: The number of community managed open spaces in an area that include community gardens (food-producing or ornamental), Adopt-A-Lots, or some other green space managed by the community.

(SOURCE: DATA WAS INTEGRATED FROM BALTIMORE GREEN SPACE, PARKS AND PEOPLE, MASTER GARDENERS, THE JOHNS HOPKINS CENTER FOR A LIVABLE FUTURE, AND POWER IN DIRT. ANALYSIS: BALTIMORE NEIGHBORHOOD INDICATORS ALLIANCE-JACOB FRANCE INSTITUTE, 2014)

### **Five Highest:**

- Greenmount East
- 2. Southwest Baltimore
- 3. Upton/Druid Heights
- 4. Sandtown-Winchester/Harlem Park
- 5 Penn North/Reservoir Hill

### **Five Lowest:**

Eight CSAs have zero community managed open spaces.

### **Number of Trees Planted**

### Measures the annual number of trees planted in Baltimore.

Definition: The Baltimore City Department of Parks and Recreation's TreeBaltimore program has the goal of planting over 8,000 trees per year. This is part of the mayor's initiative to attract 10,000 new families to Baltimore and to provide a greener, more sustainable environment. This indicator measures the number of trees planted annually by the TreeBaltimore program.

(SOURCE: BALTIMORE CITY DEPARTMENT OF PARKS AND RECREATION TREEBALTIMORE, 2013, 2014)

### **Five Highest:**

- 1. Cherry Hill
- 2. Westport/Mount Winans/Lakeland
- 3. Brooklyn/Curtis Bay/Hawkins Point
- 4. Penn North/Reservoir Hill
- 5. Sandtown-Winchester/Harlem Park

### **Five Lowest:**

- 1. Dickeyville/Franklintown
- 1. Pimlico/Arlington/Hilltop
- Southeastern
- 2. Hamilton
- 2. Harbor East/Little Italy

# Water Use (From Vital Signs 11)

### Measures the average amount of water used daily.

Definition: The median daily average water consumption of all city meters registering greater than 0.0 cubic meters per day.

(SOURCE: BALTIMORE CITY DEPARTMENT OF PUBLIC WORKS, 2011)

### **Five Highest:**

- 1. Downtown/Seton Hill
- 2. Claremont/Armistead
- 3. Cross-Country/Cheswolde
- 4. Greater Roland Park/Poplar Hill
- 5. Midtown

- Oldtown/Middle East and Canton
- 2. (Six CSAs tied for second)

### **Sanitation**

### Rate of Dirty Street and Alley Reports per 1,000 Residents

## Measure of cleanliness in the public rights-of-way.

Definition: The rate of service requests for dirty streets and alleys through Baltimore's 311 system per 1,000 residents. More than one service request may be made for the same issue but is logged as a unique request.

(SOURCE: BALTIMORE CITY CITISTAT, 2011, 2012, 2013, 2014; U.S. CENSUS, 2010)

### **Five Highest:**

- 1. Washington Village
- 2. Patterson Park North & East
- 3. Midway/Coldstream
- 4. Southwest Baltimore
- 5. Madison/East End

### **Five Lowest:**

- 1. Cross-Country/Cheswolde
- 2. Dickeyville/Franklintown
- 3. Cherry Hill
- 4. Greater Roland Park/Poplar Hill
- 5. Mt. Washington/Coldspring

### Rate of Clogged Storm Drain Reports per 1,000 Residents

#### Measure of cleanliness in storm waterways.

Definition: The rate of service requests for addressing clogged storm drains made through Baltimore's 311 system per 1,000 residents. More than one service request may be made for the same issue but is logged as a unique request.

(SOURCE: BALTIMORE CITY CITISTAT, 2011, 2012, 2013, 2014; U.S. CENSUS, 2010)

### **Five Highest:**

- 1. Washington Village
- 2. Greater Roland Park/Poplar Hill
- 3. Downtown/Seton Hill
- 4. Fells Point
- 5. Pimlico/Arlington/Hilltop

- 1. Cherry Hill
- 1. Greater Charles Village/Barclay
- 2. Cross-Country/Cheswolde
- 3. Upton/Druid Heights
- 4. Edmondson Village

### **Community Engagement**

# Percent of the Population Who Are Registered to Vote

#### Measures civic engagement.

Definition: The percentage of persons over the age of 18 registered to vote out of all persons 18 vears and over.

(SOURCE: BALTIMORE CITY BOARD OF ELECTIONS, 2010, 2012, 2014)

### **Five Highest:**

- 1. Mt. Washington/Coldspring
- 2. Edmondson Village
- 3. South Baltimore
- 4. The Waverlies
- 5. Greater Roland Park/Poplar Hill

### **Five Lowest:**

- 1. Greater Charles Village/Barclay
- 2. Downtown/Seton Hill
- 3. Brooklyn/Curtis Bay/Hawkins Point
- 4. Orangeville/East Highlandtown
- 5. Dickeyville/Franklintown

### Percent of Population Who Voted in the Last General Election

A proxy measure designed to reflect neighborhood action and participation in community life.

Definition: The percentage of persons who voted in the last general election out of all registered voters

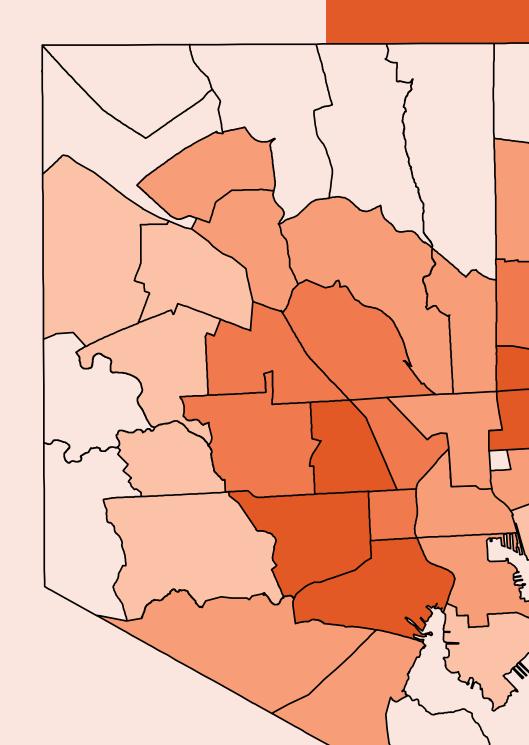

(SOURCE: BALTIMORE CITY BOArd OF ELECTIONS, 2010, 2012, 2014)

### **Five Highest:**

- 1. Greater Roland Park/Poplar Hill
- 2. Mount Washington/Coldspring
- 3. North Baltimore/Guilford/Homeland
- 4. Cross-Country/Cheswolde
- 5. Howard Park/West Arlington

- 1. Brooklyn/Curtis Bay/Hawkins Point
- Madison/East End
- 3. Cherry Hill
- 4. Downtown/Seton Hill
- 5. Southeastern
